

Build a Simple Grocery Billing System in Python

Objective:

Create a Python program that allows users to:

- View a list of grocery items with prices.
 - Add items to a cart.
 - Calculate the total bill.
 - Apply discounts and taxes.
 - Print the final invoice.
-

Requirements:

1. Use **dictionaries or lists** to store product data.
 2. Allow users to **select items and quantity**.
 3. Calculate:
 - **Subtotal**
 - **Discount** (e.g., 10% if subtotal > ₹1000)
 - **GST** (e.g., 5%)
 - **Final amount**
 4. Display the **invoice in a formatted way**.
-

Sample Output:

Welcome to Grocery Billing System
